

Mikhail Fedrunov

1C Business Analyst / ERP Application Specialist

Simferopol, Crimea · ready to relocate to Serbia

+7 978 535-35-95 · Kam1dzu00@yandex.ru · Telegram: @Kam1dzu00

Professional Profile

1C Developer and Business Analyst with practical experience in automating trade, manufacturing, warehouse, logistics, product marking, EDI, reporting and data reconciliation processes. Currently supporting 300+ users, 3 production databases and 9 databases including test environments. Strongest value: owning the full path from user conversation and process analysis to implementation, testing and production launch.

Best Fit

- Requirements collection directly from users and management without a separate analyst.
- AS-IS analysis for warehouse, logistics, sales, acts, UTD, EDI and marking processes.
- TO-BE logic, instructions, reports and control scenarios.

Technical Profile

- 1C:Enterprise 8.3, Accounting 3.0, Trade Management, Payroll/HR, Data Conversion 2.1
- Extensions, external processors, reports, documents, information registers, forms
- DCS, 1C Query Language, complex joins, grouping, tabular documents
- HTTP API, True API, FTP, JSON, XML, CSV, TXT, Postman
- Product marking, DataMatrix, Chestny ZNAK, EDI, UTD
- Background and scheduled jobs, file loading, report delivery
- Advanced Excel, VBA, basic SQL, basic Git

Experience

TD Vremya, Simferopol - System Programmer / 1C Developer

January 2026 - Present

Manufacturing and distribution companies. Support for 300+ users, 3 production databases and 6 test or development databases.

- Develop external processors, extensions, reports, documents, information registers, forms and print layouts.
- Collect requirements directly from accounting, warehouse, logistics, sales, production and management.
- Create DCS reports and complex 1C queries with joins, grouping and analytical dimensions.
- Build integrations using HTTP API, True API, FTP, JSON, XML, CSV and TXT.
- Configure background and scheduled jobs for data loading, file processing and report delivery.
- Support database exchanges, exchange plans and Data Conversion 2.1 rules at working level.
- Support users and restore working scenarios when 1C workflows or related services fail.

OVK-Term, Simferopol - 1C Operator -> Logistics Specialist -> Acts Manager -> Deputy Warehouse Manager

January 2023 - November 2025

Progressed from operational 1C work to coordination of warehouse and logistics processes.

- Learned the full goods movement cycle: receiving, placement, transfers, picking, shipment, delivery, returns and inventories.
- Analyzed discrepancies between accounting records and actual warehouse operations.
- Controlled correctness of 1C documents, acts, shipments, transfers and stock balances.
- Worked with warehouse, logistics, drivers, managers, clients and accounting.
- Built Excel reports and tools with advanced formulas, pivot tables and VBA.
- Formalized workflows and prepared instructions for employees.

Key Case Studies

Outgoing UTD and marking-code verification via Chestny ZNAK

1C / True API / DataMatrix

Problem. Some outgoing documents stayed in the database with EDI statuses showing that counterparties had not signed them. Previously, the team filtered documents in 1C and checked codes manually.

Solution. A 1C processor was developed to find sales documents, UTD records and identifiers by legal entity and period, call True API and additionally verify DataMatrix codes through KIS info.

Result. Background batch verification processes up to 10,000 codes per batch. The output table includes documents, invoices, code counts, identifiers and statuses. Work that could take several department days became a controlled automatic check.

Mobile sales-agent scan pipeline

FTP / JSON / reports

Problem. Agents scanned outlet codes and marked products, but management needed reconciliation with actual accounting sales.

Solution. A pipeline loads json.done files from FTP into 1C: sale date, agent, outlet, counterparty, item, barcode and DataMatrix.

Result. The data is used for reports by agents, departments, outlets and pack quantities, and compared with sales in the accounting database.

Internal HTML tools for marking-code operations

HTML / JavaScript

Problem. Small code-list tasks had to be solved quickly without a full 1C release cycle.

Solution. Created local tools for extracting codes from XML, CSV to TXT conversion, duplicate removal, Chestny ZNAK CSV preparation and written-off code removal.

Result. Less manual copy-paste and fewer errors in large code lists. The department received fast utilities for daily work.

Complex print forms and primary documentation

1C / tabular documents

Problem. Waybills and warehouse documents had to print correctly from 1C without manual corrections.

Solution. Modified multi-page layouts with sender, receiver, payer, driver, vehicle, table sections, weights and totals.

Result. Documents move to work faster, with fewer primary-document errors and fewer post-print corrections.

Education

V. I. Vernadsky Crimean Federal University, Physical-Technical Institute. Informatics and Computer Engineering, part-time studies, 2022-2027.

Languages and Relocation

Russian - native; Ukrainian - strong understanding; English - basic speaking and technical reading; Serbian - beginner.

Open to office, hybrid or remote work. Ready to relocate to any city in Serbia. Employer support with work authorization and legalization is required.
